

KALPATARU PROJECTS INTERNATIONAL LIMITED

Energy Management Policy

At **Kalpataru Projects International Limited**, we are committed for achieving **Excellence in energy performance** across our Engineering, Procurement & Construction (EPC) projects, manufacturing operations, and biomass-based power generation facilities.

We recognize that effective energy management is critical to **operational efficiency, cost competitiveness, environmental stewardship, and long-term business resilience**.

This policy establishes our commitment to implementing, maintaining, and continually improving an Energy Management System (EnMS) in line with the requirements of ISO 50001 standard.

- **System Approach**

We will adopt a structured and data-driven approach to measure, monitor, audit, and review energy performance across all projects, plants, stores, workshops and offices.

- **Objectives**

We will proactively identify, evaluate, and implement energy conservation opportunities to deliver measurable and sustained improvements in energy performance.

- **Promoting Culture**

We will foster a culture of energy ownership by empowering our people through awareness, innovation, collaboration, and active participation.

- **Renewable power**

We will accelerate the adoption of renewable energy sources and cleaner fuels to support a low-carbon and sustainable future.

- **Design for Performance**

We will integrate energy performance considerations into the design and engineering of all new, modified and existing facilities, equipment and processes.

- **Compliance**

We will ensure compliance with all applicable legal, statutory and other energy-related obligations.

- **Continual Improvement**

We will drive continual improvement in energy performance through robust governance, performance evaluation, and management review.
